

Meiqi Yang (She/her/hers)

Department of Civil and Environmental Engineering, and the Andlinger Center for Energy and the Environment
Princeton University, NJ, USA

Email: meiqiy@princeton.edu Google scholar: <https://shorturl.at/bCDS4>

RESEARCH INTERESTS

My research lies in designing advanced materials to improve the efficiency and reduce the cost for resource recovery from wastewater through data-driven modeling and advanced machine learning techniques.

EDUCATION

Princeton University Princeton, NJ, USA
Ph.D., Environmental Engineering 2020 - 2025 (expected)
Thesis topic: Enhancing Resource Recovery from Wastewater via Data-driven Material Engineering
Supervisor: Dr. Zhiyong Ren
Supervisory committee members: Drs. Catherine A. Peters, Claire E White, Ryan S. Kingsbury, Liangbing Hu

Yale University New Haven, CT, USA
M.S., Environmental Engineering 2018 - 2019
Research Supervisor: Drs. Menachem Elimelech and Shu Hu

Shandong University Shandong, China
B.S., (with honors), Environmental Science

EMPLOYMENT

Research Assistant, Energy Institute II, Yale University New Haven, CT, USA
Projects: Atomic Layer Deposition for Multifunctional Coatings and Ion Selective Membranes 2019 - 2020
Supervisor: Drs. Menachem Elimelech and Shu Hu

AWARDS & HONORS

| | |
|-------------|--|
| 2024 | Graduate Conferences Fellowship, Andlinger Center for Energy and the Environment |
| 2023 | Graduate Conferences Fellowship, Andlinger Center for Energy and the Environment |
| 2020 - 2021 | The Thomas J. Nelson *68 and Mary Baker Nelson SEAS Fellowship |
| May 2017 | National Innovation and Entrepreneurship Training Program, Ministry of Education of the People's Republic of China. (Group Leader) |
| 2015 - 2016 | Shandong University Scholarship and Merits Student, Shandong University |

RESEARCH EXPERIENCE & PROJECTS

| | |
|-----------------------|---|
| April, 2022 - Present | Selective Li Extraction via Cellulose Material Engineering and Surface Treatment <ul style="list-style-type: none">• Design an efficient and self-concentrating crystallization method for the selective extraction of lithium from both brines and seawater;• Synthesize novel 3D cellulose crystallizers with tunable porosity and surface properties, which achieves a state-of-the-art evaporation rate as high as $9.8 \text{ kg m}^{-2} \text{ h}^{-1}$;• Achieve Li selectivity among other co-exist ions by orders of magnitude;• Uncover the mechanism of crystallization from both theory and simulation. |
|-----------------------|---|

| | |
|-----------------------|--|
| Aug. 2021 - Present | <p>Machine learning (ML)-assisted Pervaporation (PV) Membrane Design for Organic Recovery</p> <ul style="list-style-type: none"> • Develop predictive ensemble models to select promising polymers from 1 million candidates for organic extraction, which overcomes the limitations of speed and cost of the traditional experimental approaches; • Construct a state-of-the-art PV dataset with ~3000 data points from 283 literatures; • Improve ML models' robustness via data leakage management; • Incorporate explainable ML-techniques to understand the separation mechanism of the selected membranes, assisting experimental design with data-driven evidence. |
| Jan. 2024 - Present | <p>Industry-level Model Development for Lithium Extraction</p> <ul style="list-style-type: none"> • Translating research project published at Nature Water (see Journal Publication [1]) to industry-level lithium extraction; • Develop evaporation model and climate model that could facilitate the industrial lithium production; • Improve the accuracy of evaporation model that help reduce error from 52.46% to 6.01%, significantly helps real operation and reduce cost; • Establish climate model with improved accuracy, which reduced 30% error. |
| June 2023 - Present | <p>Advancing Environmental Studies with a Specialized Large Language Model (LLM)</p> <ul style="list-style-type: none"> • Develop the largest textbook-based Q&A dataset to date, comprising over 2,000 Q&A examples from 22 environmental textbooks, enhancing resource availability in the environmental domain; • Perform large-scale data analysis for knowledge synthesis from the textbook datasets; • Create an open-source LLM platform, specifically enriched with environmental knowledge, to support research and education in environmental studies. |
| Aug. 2020 - June 2021 | <p>Multielement Alloy Catalysts Design for Selective Electrocatalytic Nitrate Reduction (ENR) to Ammonia</p> <ul style="list-style-type: none"> • The first study that investigates the synergistic effect between multiple reaction sites on multi-elemental alloy nanoparticles for effective ENR reaction; • Optimize the operational parameters such as electrolyte conditions and applied potentials to achieve a high NH_3 faradaic efficiency (93.5%) in industrially relevant acidic wastewater; • Develop a continuous flow reactor with doubled ammonia yield ($3171.0 \mu\text{g h}^{-1} \text{cm}^{-2}$) compared with pure Ru catalyst. |

PARTICIPATION IN PROPOSAL WRITING

- Department of Energy (DOE), reference number: DE-FOA-0003105, Opportunity: Critical Material Innovation, Efficiency, and Alternatives

JOURNAL PUBLICATIONS (†first author with equal contribution)

2. Kaijie Yang, **Meiqi Yang**, Hongxu Chen, Sunxiang Zheng, Zhiyong Jason Ren "Leveraging Solar Energy to Revolutionize Brine Mining."

CONFERENCE & PRESENTATION

- Towards an environmentally just transition: the future of lithium mining, *Princeton Energy & Climate Scholars (PECS) & Princeton High Meadows Environmental Institute (HMEI)*, 2024, invited panelist
- New material for selective and effective lithium extraction from saline water, *American Chemical Society*, New Orleans, 18 March, 2024, poster presentation
- Machine learning for polymer design to enhance pervaporation-based organic recovery, *American Chemical Society*, New Orleans, 19 March, 2024, oral presentation
- Leveraging Wood Chemistry for High-Performance Selenium Recovery with Reactive Evaporator, *Association of Environmental Engineering and Science Professors*, Boston, 20 June, 2023, oral presentation
- Spatially Separated Crystallization for Selective Lithium Extraction from Saline Water, *Materials Imaging Workshop*, 3 November, 2023, invited oral presentation
- Enhancing Pervaporation-based Organic Recovery through Machine Learning-Assisted Polymer Design, *Association of Environmental Engineering and Science Professors*, Boston, 20 June, 2023, poster presentation
- Accelerated Lithium Extraction from Brines with Interfacial Evaporation, *American Geophysical Union Conference*, Chicago, 12 December, 2022, poster presentation
- Highly Selective Electrochemical Nitrate to Ammonia Conversion in Acidic Industrial Wastewater Condition by Dispersed Ru in a Multielement Alloy Catalyst, *Andlinger Center for Energy and the Environment Annual Meeting*, Princeton, 14 October, 2022, poster presentation
- Preparation of carboxymethyl Chitosan Microspheres and the Adsorption of Heavy Metal Cadmium, *International Conference on Innovative Material Science and Technology*, IMST 2016, 305-313.

PATENTS

- **Meiqi Yang**, a *Fluorine-Containing Wastewater Treatment Plant*. **Certificate of Utility Model Patent: ZL 201720239707.7**

TEACHING & MENTORSHIP

- Linda Zeng, The Harker Upper School, California, High School Student, June - July 2024
- Christopher Li, Princeton University, Sophomore, Feb. - May 2024
- Ryan Neapole, Princeton University, Undergrad Thesis, now at Stanford University, Feb. - May 2023
- Qixiang Feng, Princeton International School of Mathematics and Science, High School Student, June - Aug. 2023
- Siyu (Quinn) Li, Dwight-Englewood School, High School Student, now at University of Pennsylvania, 2022
- ENE321-CEE321_F2021 Resource Recovery for a Circular Economy, Teaching Assistant, 2021 Fall
- Gouri Krishnan, King School in Stamford, High School Student, now at Columbia University, 2019

SKILLS

- **Software:** Pytorch, Python, UNIQAC, COMSOL, FDTD, Avizo, Athena, Artemis, AutoCAD
- **Instrumental Operation:** X-ray photoelectron spectroscopy (XPS), X-ray powder diffraction (XRD), Scanning/Transmission Electron Microscope (S/TEM), Atomic Layer Deposition (ALD), Scanning electron microscope (SEM), UV-Vis-DRS, Ellipsometry, Electrochemical Impedance Spectroscopy (EIS), and 3D X-ray tomography Microscope, etc.
